

Your New Client App & Admin Portal

A simple overview — what we are building and how it will work

What we are building

A simple mobile app for your GST clients, and a web dashboard for you and your staff. This will replace the manual back-and-forth of collecting documents and sharing reports over email/WhatsApp.

How it will work

- Your client opens the app, logs in, and uploads their GST documents (invoices, statements, etc.) for the month.
- You (or your staff) see all uploaded documents on your dashboard, organized by client and month.
- Once the GST report is ready, you upload it once — the client instantly gets it in their app, plus an email and a phone notification.
- The app automatically reminds clients a few days before the GST filing due date, so fewer people miss the deadline. You can also send a reminder manually anytime, and see exactly who has been reminded and when.

Who uses what

Your Clients	Mobile app (Android) — upload documents, view/download reports, get reminders
You (CA)	Web dashboard — full access to all clients, documents, reports, reminders, and staff management
Your Staff	Same web dashboard, with limited access as per what you allow them to do

Rollout plan

- Phase 1: Your 150 GST clients — built and launched first.
- Phase 2: Your 750 ITR clients — added once Phase 1 is running smoothly.

Cost approach

Everything is being built using low-cost cloud services (Amazon Web Services), with free-tier options used wherever possible for the first year to keep your ongoing cost minimal. A rough running cost estimate will be shared separately once the detailed technical plan is finalized.

Your documents are private and secure

Only you, your staff, and the specific client can access that client's documents. Files are never publicly accessible, and all data is transferred over a secure, encrypted connection.
